PT. RAVISHANKAR SHUKLA UNIVERSITY: RAIPUR
SCHOOL OF STUDIES IN STATISTICS

Syllabus and Scheme of Examination
M.A./M.Sc. (Statistics) Semester Course 2021-22

The M.A./ M.Sc. Course in Statistics shall be spread over four semesters. Each semester shall have four theory and two practical courses except the fourth semester. The fourth semester shall have four theory courses, one practical and one Project Work . Each theory course will be of 4 hours teaching per week carrying 4 credits. The theory course examination will be of 3 hours duration and shall carry 100 marks each out of which 20 marks will be based on internal assessment. Each practical course will be of 4 hours duration per week carrying 2 credits. The examination of each practical course will be of 4 hours duration and shall carry 100 marks out of which 10 marks shall be fixed for viva -voce and 20 marks for practical record. The Project Work shall be of 100 marks having 2 credits.

Along with above courses, in Semesters II and III, there will be one additional optional paper of 3 credits to be offered from other programs under Choice Based Credit System.

FIRST SEMESTER

S. No.	Paper	Subject	Theory Exam Marks	Internal assessment Marks	Total Marks	Credit points
1	I	Real Analysis	80	20	100	04
2	II	Statistical Methods	80	20	100	04
3	III	Probability and Measure	80	20	100	04
4	IV	Applied Statistics	80	20	100	04
5	V	Lab Course I : Practical Based on Courses I &II			100	02
6	VI	Lab Course II :Practical Based on Courses III & IV			100	02
				Total Credit points		**20**

SECOND SEMESTER

S. No.	Paper	Subject	Theory Exam Marks	Internal assessment Marks	Total Marks	Credit points
1	I	Linear Algebra	80	20	100	04
2	II	Statistical Computing	80	20	100	04
3	III	Stochastic Processes	80	20	100	04
4	IV	Sampling Theory	80	20	100	04
5	V	Lab Course I :Practical Based on Courses I, II			100	02
6	VI	Lab Course II :Practical Based on Courses III &IV			100	02
7	VII	Choice Based Credit System (Minor Elective from other Subject)	80	20	100	03
				Total Credit points		**23**

THIRD SEMESTER

S. No.	Paper	Subject	Theory Exam Marks	Internal assessment Marks	Total Marks	Credit points
1	I	Multivariate Analysis	80	20	100	04
2	II	Inference-I	80	20	100	04
3	III	Operation Research-I	80	20	100	04
4	IV	Statistical Quality Control	80	20	100	04
5	V	Lab Course I : Practical Based on Courses I and II			100	02
6	VI	Lab Course II :Practical Based on Courses III and IV			100	02
7	VII	Choice Based Credit System (Minor Elective from other Subject)	80	20	100	03
				Total Credit points		**23**

FOURTH SEMESTER

S. No.	Paper	Subject	Theory Exam Marks	Internal assessment Marks	Total Marks	Credit points
1	I	Design of Experiment	80	20	100	04
2	II	Inference - II	80	20	100	04
3	III	Operation Research II	80	20	100	04
4	IV	Any of the following (Major Elective) (a) Reliability and Life Testing (b) Demography (c) Econometrics	80	20	100	04
5	V	Lab Course : Practical Based on Courses I, II, and III			100	02
6	VI	Project Work			100	02
			Total Credit points			**20**

Grand Total of Credit Points = 86

FIRST SEMESTER

Paper I: Real Analysis
Paper II: Statistical Methods
Paper III: Probability and Measure
Paper IV: Applied Statistics
Paper V: Lab Course I: Practical Based on Papers I &II
Paper VI: Lab Course II: Practical Based on Papers III & IV

Paper–I
Real Analysis

UNIT-I

Recap of elements of set theory; Introduction to real numbers, Introduction to n-dimensional Euclidian space; open and closed intervals (rectangles), compact sets, Bolzano - Weirstrass theorem, Heine - Borel theorem. Sequences and series and their convergence.

UNIT-II

Real valued function, Properties of real valued continuous function on R^n , Uniform continuity, Sequences and series of functions, Uniform convergence. Power series and radius of convergence.

UNIT-III

Differentiation, maxima - minima of functions; functions of several variables, constrained maxima - minima of functions. Multiple integrals and their evaluation by repeated integration, Dirichlet and Lioulle's Theorem. Change of variables in multiple integration.

UNIT-IV

Reimann-Stieltjes integral of real valued function & its properties, Mean value theorem, Integration by parts and change of variables, Term by term integration, Differentiation & integration under the integral sign. Improper integral, Uniform convergence in improper integrals, Test for absolute and conditional convergence.

Paper –II

Statistical Methods

UNIT-I

Frequency distribution, measures of location, dispersion and skewness, Moments and cumulats, moment generating function.

Simple correlation coefficient, Multiple and Partial Correlation. Linear and Multiple Regression, and their application, Intra class correlation, Correlation ratio.

UNIT-II

Testing of hypothesis, Level of significance, degrees of freedom, Central and Non-central chi-square, t and F- distributions, their properties and related tests. Sampling distributions of mean and variance of a sample from a normal population, sampling distribution of simple correlation coefficient in null case.

UNIT-III

Definition of probability, Bayes' theorem, Basic distribution function probability mass function, probability density function, joint, marginal and conditional p.m.f. . Random Variables and its mathematical expectations, conditional Expectation, Expectation of sum and multiplication of random variables, Markov Holder-Jensen and Liapounov inequalities.

Standard Discrete Distributions- Bernoulli, Binomial, Poisson, Geometric, Hyper geometric and Multinomial distribution. Limiting form of Binomial and Poisson distributions.

UNIT-IV

Standard continuous distributions-Uniform, Exponential, Normal Beta, Gamma and Cauchy distributions. Order Statistics-their distributions and properties. Joint & Marginal distributions of Order-Statistics.

Paper –III

PROBABILITY AND MEASURE

UNIT-I

Random experiment, Definition of Probability, Additive and multiplicative theorems of probability, Axiomatic approach to probability, Bayes Theorem. Classes of sets, fields, sigma-fields, minimal sigma-field, Borel sigma-field in R_k, sequence of sets, limsup and liminf of a sequence of sets. Measure, Probability measure, properties of a measure, Lebesgue and Lebesgue- Steljes measure on R_k.

UNIT-II

Measurable set, Measurable functions, Random variables, sequence of random variables, almost sure convergence, convergence in probability (and in measure). Convergence in r^{th} mean Integration of a measurable function with respect to a measure **Convergence in distribution,** Convergence in R Monotone convergence theorem, Fatou's lemma, Dominated convergence theorem.

UNIT -III

Borel-Cantelli Lemma, Independence, Weak law and strong law of large numbers for iid sequences, Definition and examples of Markov dependence, Chebychev's Inequality, Probability generating function with examples.

UNIT -IV

Characteristic function and its properties uniqueness theorem, Levy's continuity theorem (statement only), CLT for a sequence of independent random variables under Lindeberg's condition, CLT for iid random variables. Problems based on CLT.

Paper –IV

APPLIED STATISTICS

UNIT-I

Sources of demographic data –census, register, adhoc survey, hospital records, measurement of mortality ,crude death rate, age specific death rates, standardized death rate infant mortality rates, Complete and abridged life table-Kings method, Greville's method and method of Reed and Merrel, Construction of life table.

UNIT-II

Laws of mortality-Fitting of Makeham's law, Measurement of fertility-crude birth rate, general fertility rate ,age-specific birth rate, total fertility rate ,gross reproduction rate. The Stable and Stationary populations, Logistic curve for population growth, Population Projection.

UNIT -III

Different Component of time series, Measurement of secular trend: Fitting of mathematical curves, method of moving average, variate difference method, effect of elimination of trend ,merits and demerits of different methods of trend estimation. seasonal components, Determination of cyclical component., Periodogram analysis, Yule-Slutsky effect, Correlogram Analysis.

UNIT -IV

Index number :meaning and construction of index number, different formulae for constructing index numbers, tests of consistency of index number formulae, Chain base index numbers, Cost of living index numbers, Whole sale price index numbers. Demand Analysis: Demand and supply curves, Price elasticity of demand and supply, determination of demand curves from market data, Engel' Law and Engle's Curve.

Paper V : Lab Course I – Practical Based on Paper I & II
Paper VI : Lab Course II – Practical Based on Paper III & IV

SECOND SEMESTER

Paper – I : Linear Algebra
Paper - II : Statistical Computing
Paper - III : Stochastic Processes
Paper - IV : Sampling Theory
Paper-V: Lab Course - I : Practical based on Papers I and II
Paper-VI: Lab Course -II : Practical based on Papers III &IV
Paper- VII : Choice Based Credit System (Minor Elective from other Subject)

Paper -I

Linear Algebra

UNIT-I

Fields, vector spaces, subspaces, linear dependence and independence, basis and dimension of a vector space, finite dimensional vector spaces, completion theorem, examples of vector spaces over real and complex fields, linear equations. Determinants.

UNIT-II

Vector spaces with an inner product, Gram-Schmidt orthogonalization process, orthonormal basis and orthogonal projection of a vector. Linear transformations, algebra of matrices, row and column spaces of a matrix, elementary matrices, rank and inverse of a matrix, null space and nullity, partitioned matrices, Kronecker product.

UNIT-III

Hermit canonical form, generalized inverse, Moore-Penrose generalized inverse, Idempotent matrices, Solutions of matrix equations. Real quadratic forms, reduction and classification of quadratic forms, index and signature, triangular reduction of a positive definite matrix.

UNIT-IV

Characteristic roots and vectors, Cayley-Hamilton theorem, minimal polynomial, similar matrices, algebraic and geometric multiplicity of a characteristic root, spectral decomposition of a real symmetric matrix, reduction of a pair of real symmetric matrices, Hermitian matrices. Singular values and singular value decomposition, Jordan decomposition, extrema of quadratic forms, vector and matrix differentiation**.**

Paper – II

Statistical Computing

UNIT -I

Numerical Analysis : Finite differences & interpolation, Interpolation with unequal intervals, Central differences Interpolation-Gauss's, Stirling's and Bessel's Formulae.

UNIT -II

Numerical differentiation and integration, Trapezoidal rule, Simpson's one third, 3/8 rule, Weddle's rule, Euler-Maclaurin Summation Formula, Newton-Cotes Formula, Gauss formula for approximation to factorials, Difference equation of first and second order.

UNIT -III

R Software: introduction Programming, Data Analysis, Calculations of various statistic & Inference drawing, Non Parametric Statistic.

UNIT -IV

Use of Excel, SPSS for data analysis (To calculate mean, median, mode, standard deviation, coefficient of correlation, chi square, t and F tests).

Paper - III
Stochastic Processes

UNIT -I

Introduction to stochastic processes (sp's).; classification of sp's according to state space and time domain. Countable state Markov chains (MC's), Chapman-Kolmogorov equations; calculation of n-step transition probability and its limit. Stationary distribution, Classification of states; transient MC; Probability generating function. Properties of probability generating function .Laplace transform & its properties.

UNIT -II

Random walk and Gambler's ruin problem ; Applications from social, biological and physical sciences. Renewal theory: Elementary renewal theorem and applications. Statement and uses of key renewal theorem; study of residual life time process. Martingle in discrete time, inequality, convergence and smoothing properties.

UNIT -III

Discrete state space continuous time MC ; Kolmogorov- Feller differential equations ; Poisson process, birth and death process ; Applications to queues and storage problems. Wiener process as a limit of random walk; first - passage time and other problems.

UNIT -IV

Stationary process: weakly stationary and strongly stationary processes; Moving average and auto regressive processes. Branching process : Galton-Watson branching process, probability of ultimate extinction, distribution of population size. Statistical inference in MC and Markov processes.

Paper - IV

Sampling Theory

UNIT-I

Sample Surveys : concept of population sample and properties of estimator for finite populations, need for sampling, census and sample survey, sample selection and sample size, Basic finite population sampling techniques ,simple random sampling with and without replacement, Estimation of population proportion, Non-sampling errors, estimation of population mean in presence of non-response. Randomised response technique: Warner's method.

UNIT-II

Stratified sampling, systematic sampling and related results on estimation of population mean/total. Allocation problem in stratified sampling. Optimum allocation, Neyman allocation and Proportional allocation, Estimation of gain in precision due to stratification, Post Stratification, Construction of strata, Effect of increasing number of strata. Systematic sampling. Comparison of stratified, systematic and simple random sampling, Systematic sampling under a linear model.

UNIT-III

Ratio regression estimators based on srswor and stratified methods of sampling. Bias of ratio estimate and optimum property of ratio estimate, Ratio estimate in stratified sampling, Regression estimate with pre-assigned and with estimated regression coefficient, comparison of ratio and regression estimate with sample mean. Unequal probability sampling: pps wr/wor methods [including Lahiri's scheme] and related estimators of a finite population mean [Desraj estimator and Murthy's estimator].

UNIT-IV

Cluster sampling. One stage cluster sampling, variance and cost functions, sampling with probability proportional to cluster size, Hurwitz-Thompson estimator , two stage cluster sampling ,Allocation of sample to two stages :equal first stage unit comparison of two stage with one stage sampling. Double sampling ratio and regression estimate with cost aspect .

Paper I

Multivariate Analysis

UNIT-I
Multivariate Normal Distribution and its properties, Reproductive property, transformation by a vector, singular /non-singular matrix, conditional distribution of a sub-set of multivariate normal variable/ Random sampling from a multivariate normal distribution. Maximum likelihood estimators of parameters. Distribution of sample mean vector.

UNIT-II
Null and non-null distribution of simple correlation coefficient. Null distribution of partial and multiple correlation coefficient. Distribution of sample regression coefficients. Distribution of Hotelling's T^2 statistic. Application in tests on mean vector for one and more multivariate normal populations and also on equality of the components of a mean vector in a multivariate normal population, Fisher-Behran statistic, Mahalanobis D^2 Statistic.

UNIT-III
Distribution of sample generalized variance. Wishart matrix - its distribution and properties, Characteristic function of Wishart distribution ,chi-square distribution as a particular case of Wishart distribution. Multivariate linear regression model-estimation of parameters, tests of linear hypotheses about regression coefficients.

UNIT-IV
Classification and discrimination procedures for discrimination between two multivariate normal populations - sample discriminant function, probabilities of misclassification and their estimation, classification into more than two multivariate normal populations. Principal components, Dimension reduction, Canonical variables and canonical correlation - definition, use, estimation and computation. Factor Analysis. Cluster Analysis.

PAPER - II

INFERENCE- I

UNIT- I

Unbiasedness , Consistency, efficiency and sufficiency of point estimator, Fisher –Neyman factorization theorem, Cramer -Rao inequality, Bhattacharya bounds, Minimum Variance unbiased estimators, Minimal sufficient statistics,

Unit –II

Likelihood function, examples from standard discrete and continuous distributions. such as Bernoulli, Binomial, Poisson, normal, exponential gamma etc) Methods of estimation – Method of maximum likelihood estimators, properties of maximum likelihood estimators. Method of scoring, method of moments, method of minimum chi-square, method of minimum variance, B.A.N. estimators. CAN estimators.

Unit- III

Rao-Blackwell theorem. Completeness of sufficient statistics. Completeness and Bounded Completeness, Koopman's theorem (Distributions admitting sufficient statistics),.Lehmann-Scheffe theorem, UMVUES, Invariant estimators. Confidence interval and confidence coefficients, Theory of confidence set, Relationship with the theory of hypothesis testing, Confidence interval for large samples.

UNIT-IV

Loss function, Risk function, Admissibility, Minimax rule, Bays rule, Structure of Bay's rule, Construction of a Minimax rule, point and interval estimation as decision problem. State of nature, payoff opportunity loss or regret, expected monitory value(EMV) criterion for decision making, maximum, maximax and minimax regret strategy, expected value of perfect information (EVPI).

Paper - III

Operations Research -I

UNIT-I

Definition and scope of Operational research ; phases in Operations Research ; models and their solutions ; decision-making under uncertainty and risk, use of different criteria ; The structure and formation of a linear programming problem,Graphical and simplex procedure,Two phase methods, and charne's-M method with artificial variables ; duality theorem .

UNIT -II

Transportation and Assignment problems, Routing and traveling salesman problem .

UNIT -III

Inventory problems – Deterministic models of inventory , Economic Lot size formula ,instantaneous production case ,finite production rates situation ,cases when shortages are allowed /not allowed. Stochastic inventory models – a single period model with no set up cost.

UNIT -IV

Basic characterics of queuing systems, Steady-state solutions of M/M/1 and M/M/c models with associated distributions of queue-length and waiting time. M/G/1 queue and Pollazcek Khinchine result. Steady-state solutions of M/Ek/1 and E_k/M/1 queues, Machine interference problem. Transient solution of M/M/1 queue.

Decision-making in the face of competition, two-person games, pure and mixed strategies, existence of solution and uniqueness of value in zero-sum games, finding solutions in 2x2, 2xm and mxn games. Non-zero sum games, co-operative and competitive games, equilibrium solutions and their existence in bi-matrix games. Nash equilibrium solution. ;

PAPER - IV
Statistical Quality Control

UNIT-I

Basic concept of process monitoring and control, process capability and process optimization. General theory and review of control charts for attribute and variable data ; O.C. and A.R.L. of control charts, control by gauging.

UNIT-II

Moving average and exponentially weighted moving average charts ; Cu-sum charts using V-masks and decision intervals ; Economic design of X-bar chart. Capability indices Cp, Cpk and Cpm ; estimation, confidence intervals and tests of hypotheses relating to capability indices for Normally distributed characteristics.

UNIT-III

Acceptance sampling plans for attribute inspection ; single, double and sequential sampling plans and their properties ; Bayesian sampling plan.

UNIT-IV

Plans for inspection by variables for one-sided and two-sided specifications ; Continuous sampling plans of Dodge type and Wald-Wolfiwitz type and their properties. Use of Design of Experiments in SPC; factorial experiments, fractional factorial designs, construction of such designs and analysis of data. Multivariate quality control; use of control ellipsoid and of utility.

Paper – I

Design of Experiments

UNIT –I

Gauss- Markov set-up, Estimability condition, best point estimates/interval estimates of estimable linear parametric functions ,Normal equations and Least squares estimates, Gauss-Markov Theorem, Introduction to fixed, mixed and random effects linear models. Analysis of variance for one way and two way classified data with equal and unequal number of observations per cells, Analysis of covariance model.

UNIT -II

Introduction to design of experiments, Principle of design of experiments, completely randomized design, Randomized block design, Latin square design. Missing plot technique - general theory and applications, efficiency of a design.

Graeco Latin Square design, Cross-over designs, Analysis of covariance: Applications to standard designs with one concomitant variable, Split plot and split block experiments, efficiency of whole plot and sub plot treatments, merits and demerits of split plot experiments.

UNIT -III

General factorial experiments, factorial effects; best estimates and testing the significance of factorial effects ; study of 2 and 3 factorial experiments in randomized blocks ; Complete and partial confounding. Fractional replication for symmetric factorials, 2^n experiment with 2^k blocks per replicate, 3^2 experiment.

UNIT -IV

General block design and its information matrix. criteria for connectedness, balance and orthogonality, BIBD- Analysis with intrablock information and recovery of interlock information ; PBIBD, Youden design - intrablock analysis.

Application areas: Response surface experiments; first order designs and orthogonal designs.

Paper-II
Inference II

UNIT -I

Test of Hypothesis: Concepts of critical regions, Test functions, two kinds of errors. Size function, power function, level, M. P. and U,M.P. Test, Neymann Pearson Lemma, M.P. test for simple null against simple alternative hypothesis ,UMP test for simple null hypothesis against one sided alternatives in one parameter exponential family .Unbiased test, UNIFORMELY most powerful unbiased test ,Type "A" critical region or locally most powerful unbiased test. Generalized form of Neyman Pearson lemma.

UNIT-II

Composite Hypothesis and similar regions, similar regions and complete sufficient statistics, Construction of most powerful similar regions, Unbiased critical regions, optimum regions and Sufficient Statistics. Likelihood ratio test, properties of likelihood ratio test, Likelihood ratio test for the mean of normal population, LR test for equality of means and variances of two and several normal populations.

UNIT -III

Sequential analysis: Wald's sequential probability ratio test (SPRT) with prescribed errors of two types, OC and ASN function of SPRT.

UNIT -IV

Non parametric test, Rank test, Wilcoxon test, Median test, Sign test, Mann-Whitney U test, Wald-Wolfowitz run test, Kolomogorov-Smirnov test, One sample location problem, chi square test of goodness of fit.

Paper –III

Operations Research -II

UNIT -I

Repllacement problems : Replacement of items that fails and those that deteriorate ,group and individual replacement policies

UNIT -II

Network analysis,-Shortest Path Problem, Project planning and control with PERT and CPM

UNIT-III

Integer programming-Branch and Bound technique. Dynamic programming , Deterministic and Probabilistic Dynamic programming: decision tree and Bellman's Principle of optimality, models of dynamic programming,

UNIT-IV

Quadratic programming, Kuhn-Tucker conditions for quadratic programming problem, Wolf's modified simplex method, Beale's method Goal Programming simulation :Monte Carlo method.

Paper – IV
Any one of the following (Major Elective)
(a) Reliability and Life Testing
(b) Demography
(c) Econometrics

Paper – IV (a)
RELIABILITY AND LIFE TESTING (Major Elective)

UNIT -I

Reliability concepts and measures ; reliability function ; hazard rate ; components and systems ; coherent systems ; reliability of coherent systems ; cuts and paths ; modular decomposition ; bounds on system reliability ; structural and reliability importance of components.

UNIT -II

Life distributions ; common life distributions-exponential, Weibull, gamma etc. Estimation of parameters and tests in these models. Notions of ageing ; IFR, IFRA, NBU, DMRL, and NBUE Classes and their duals ; loss of memory property of the exponential distribution ; closures or these classes under formation of coherent systems, convolutions and mixtures.

UNIT -III

Univariate shock models and life distributions arising out of them ; bivariate shock models ; common bivariate exponential distributions and their properties. Reliability estimation based on failure times in variously censored life tests and in tests with replacement of failed items .

UNIT -IV

Stress-strength reliability and its estimation. Maintainability and availability, Maintenance and replacement policies ; availability of repairable systems ; modeling of a repairable system by a non-homogeneous Poisson process. Reliability growth models; Hollander-Proschan and Deshpande tests for exponentiality; tests for HPP vs NHPP with repairable systems. Basic ideas of accelerated life testing.

Paper – IV(b)

DEMOGRAPHY (Major Elective)

UNIT – I

Coverage and content errors in demographic data, Chandrasekharan-Deming formula to check completeness of registration data, adjustment of age data-use of Whipple, Myer and UN indices, Population transition theory.

UNIT – II

Measures of fertility; Stochastic models for reproduction, distributions of time of birth, inter-live birth intervals and of number of births (for both homogeneous and homogeneous group of women), estimation of parameters; estimation of parity progression from open birth interval data.

UNIT – III

Measures of Mortality; construction of abridged life tables, infant mortality rate and its adjustuemts, model life table. Stable and quasi-stable populations, intrinsic growth rate. Models of population growth and their filling to population data.

UNIT – IV

Internal migration and its measurement, migration models, concept of international migration. Methods for population projection, component method of population projection, Nuptiality and its measurements.

Paper – IV(c)
ECONOMETRICS (Major Elective)

UNIT – I

Nature of econometrics, the general linear model (GLM) and its extensions, ordinary least squares (OLS) estimation and prediction, generalized least squares (GLS) estimation and prediction, heteroscedastic disturbances, pure and mixed estimation.

UNIT – II

Auto correlation, its consequences and tests. Theil BLUS procedure, estimation and prediction, multicollinearity problem, its implications and tools for handling the problem, ridge regression. Linear regression and stochastic regression, Instrumental variable estimation. Errors in variables.

UNIT – III

Autoregressive linear regression, lagged variables, distributed lag models, estimation of lags by OLS method, Koyck's geometric lag model, Simultaneous linear equations model and its generalization, identification problem, restrictions on structural parameters, rank and order conditions.

UNIT – IV

Estimation in simultaneous equations model, recursive systems, 2 SLS estimators, limited information estimators, k-class estimators. 3 SLS estimator, full information maximum likelihood method, prediction and simultaneous confidence intervals.
