SYLLABUS

2015-2016

PT. RAVISHANKAR SHUKLA UNIVERSITY
RAIPUR
CHHATTISGARH
SCHEME OF EXAMINATION & SYLLABUS

FOR M.Phil. (ELECTRONICS)

UNDER

FACULTY OF SCIENCE

Approved by Board of Studies in Electronics

EFFECTIVE FROM JULY 2015

Approved by Board of Studies in Electronics on 18th November 2014

PT. RAVISHANKAR SHUKLA UNIVERSITY, RAIPUR
SCHEME OF EXAMINATION & SYLLABUS PRESCRIBED FOR THE EXAMINATION OF

M.Phil in Electronics
SESSION 2015-2016

1. Objective of the course:
   - To provide academic progression to students obtaining M.Sc. degree willing to pursue an academic career
   - To provide academic progression to professionals engaged in academic fields
   - To provide a bridge course for an M.Sc. student so as to encourage him / her for research.
   - 4. To introduce emerging areas as discourses of study for promoting academic activities and research in related fields.

2. Course Methodology: A detailed treatment of each topic will be presented in class but a major portion of each class session will involve interaction and discussion. It is essential, therefore, that each student has a reading of the topic to be taken up in a class prior to attending the session. Written / presentation assignments will explore the issues and their logical consequences. Programming assignments will offer both programming experience and an opportunity to experiment with ideas. Dissertation work will involve students individually carry out a detail study on a topic and implement a related system.

Scheme of Examination:
The Master of Philosophy (M.Phil.) in Electronics is a full time course for one year after completion of M.Sc. in Electronics, Electronic Science, Physics, Instrumentation. Admission to M.Phil (Electronics) programme will be done through entrance examination.
The course structure will contain three theory papers, seminar (two) and dissertation as outlined below:

<table>
<thead>
<tr>
<th>S.No.</th>

Paper I

Research Methodology, Quantitative Methods & Computer Applications

Unit I - Introduction and Design of research

Meaning, objective and significance of research, types and parameters of research, research process, identification and definition of the research problem, definition of construct and variables, pure and applied research design, exploratory and descriptive design methodology, qualitative Vs quantitative research methodology, field studies, field experiments Vs laboratory experiments, research design in social and physical sciences.

Unit II - Data Analysis

Procedure for testing of Hypothesis, the null hypothesis, determining level of significance, type I and type II errors, grouped data distribution, measures of central tendency, measures of spread/dispersion, normal distribution, analysis of variance: one way, two way, Chi square test and its application, students 'T' distribution, non parametric statistical techniques, binomial test, Correlation and regression analysis - discriminate analysis - factor analysis - cluster analysis, measures of relationship.

Unit III – Solar PV fundamentals and Emerging Solar Cell Technologies

P-N junction under illumination: Generation of Photo voltage, Light Generated current, I-V equation, Solar Cell Characteristics, parameters of solar cells, Relation of Voc and Eg
Design of solar cells: Upper limit of cell parameters, Losses in Solar Cell, Design for High Isc, Voc and FF
Analytical Techniques: Solar Simulator-IV measurement, Quantum efficiency measurement, Minority carrier lifetime & diffusion length measurement.
Thin film solar cell technologies: amorphous Si solar cells, CdTe solar cells, Dye Sensitized Solar cells, Present status of different PV technologies, Shockley-Queisser limit.

Unit IV – Molecular Devices and Semiconductor Device Simulation

Molecular Devices: Operation fundamentals of organic LEDs, Organic FETs and Organic solar cells, Basic physics underlying device operation, Fundamental benefits and limitations of the organic materials
Introduction to Semiconductor Device Simulation: Need of Simulation, Process Simulation, Device Simulation device simulation sequence, hierarchy of transport models, DD Model, Relationship between various transport regimes and significant length-scales.
Numerical Solution Methods - finite difference scheme, discretization of Poisson's and current continuity equations.
Unit V - Image Fundamentals –
Digital Image representation, fundamental steps in Digital Image processing, image acquisition, 
storage, processing, communication & display, Simple image model, sampling and quantization, 
some basic relationships between pixels: Neighbors of a pixel, connectivity, labeling of 
connected Components, Relations, distance Measures.

Image Transforms
Introduction to Fourier Transform, The Discrete Fourier Transform, some properties of two 
dimensional Fourier transform: Separability, translation, periodicity & conjugate symmetry, 
rotation, distributive and scaling, average value, convolution and correlation, sampling. The 
Fast Fourier Transform: FFT algorithm, number of operations, the inverse FFT, implementation. 
Other Separable Image Transforms: Walsh Transforms, Discrete Cosine Transform, Hadamard 
Transform, the Haar & Slant transform.
Study of basic functions of image processing toolbox of Matlab software

Paper II

Photonics, Advanced Concepts in Solar Cell Technologies and Nano Science 
&Technology

Unit I - Photonics
General principle of electroluminescence devices, Light emitting diodes, Material selection for light emitting diodes, Diode lasers, Inorganic electroluminescence, ACTFEL device, EL characteristics, EL excitation mechanism.

**Unit II - Advanced Concepts in Solar Cell Technologies**
Need of sustainable energy sources, Sustainable Sun’s energy, Concepts Fundamental limits on conversion efficiency Shockley-Queisser theory, Multiple Junction solar cells, Quantum dot solar cells, Intermediate band solar cells, Photon splitting and multi-application High efficiency c-Si solar cells, Staebler-Wronski effect
Fabrication of crystalline Si solar cells, Thin film crystalline Silicon solar cell technologies, Thin Cadmium Telluride and Copper Indium Gallium Selenide Cell Technologies.

**Unit III -**
**Solar PV modules,** Series and parallel connection of cells, Mismatch in series and parallel connection, PV module power output as function of temperature and solar radiation
**Concentrators Photovoltaic (CPV) Cells**- Light concentration, concentration ratio, Optics for CPV paraboloid reflector Compound parabolic concentrator Fresnel’s Lens concentrator
**Tracking requirement of CPV**

**Unit IV -**
Introduction to thin films Two dimensional material, various methods of thin films growth, Molecular Beam Epitaxy (MBE), Controlled deposition of single Atomic Layer, Liquid Phase Epitaxy (LPE) and Vapour Phase Epitaxy (VPE), Characterization of thin Film. Application of thin film, Metal nanoclusters, semi conducting nanoparticles, rare gas and molecular clusters, methods of synthesis, carbon nanostructures, applications of carbon nanotubes, bulk nanostructured materials, solid disordered nanostructures, nanostructured crystals, photonic crystals.

**Unit V -**
Introduction to Nano science, Classification of Nano materials, Size dependence of properties, Energy Bands, Chemical Mechanical, Magnetic, Structural, Optical (linear & non-linear) properties of nanoparticles. Emergence of nanotechnology: Bottom-up & Top-down approach.

**Reference Books -**
1. Optical Properties of Solids Mark Fox Oxford University Press
5. Introduction to Nanotechnology- Charles P. Poole and Frank J. Ovens, Wiley and Sons
7. Nanotechnology-Basic Science and Emerging Technologies by M. Wilson, Kamali Kannangara Geoff Smith, Michelle Simmons, B, Raguse
8. Nanotechnology- An Introduction to Nanostructuring Techniques-Wolfgang Fritzsche
9. Nanomaterials- synthesis, Properties & application A.S.Edelstein & R C Cammarata
   Introduction to Nanotechnology-Charles P. Pool;e. Jr. & Frank J. Qwens)"

Paper III - Digital Image Signal Processing

Unit I - Image Enhancement
Spatial domain methods and frequency domain methods, Enhancement by point processing: histogram processing, Image subtraction, image averaging. Spatial Filtering: smoothing and sharpening filters. Enhancement in the frequency Domain: lowpass, high pass and homomorphic filtering. Generation of spatial masks from frequency domain specifications, Color image processing: color fundamentals, color models, pseudo color image processing, full color image processing.

Unit II - Image Restoration
Degradation Model for continuous functions, discrete formulation, Diagonalization of circulant and Block Circulant matrices: circulant matrices block circulant matrices, effect of diagonalization on the degradation model. Algebraic approach to restoration: unconstrained and constrained restoration. Inverse filtering, least mean square (Wiener ) filter, Constrained least squares Restoration, Interactive Restoration , restoration in the spatial domain, geometric transformations: spatial transformations, gray level interpolation

Unit III - Image Compression

Unit IV - Image Segmentation
Detection of discontinuities: point, line, edge and combined detection. Edge linking and boundary detection: local processing, global processing via the Hough Transform, global processing via graph theoretic techniques. Thresholding: foundation, the role of illumination, simple global thresholding, optimal thresholding, thresholding selection based on boundary characteristics, thresholds based on several variables. Region oriented segmentation, use of motion in segmentation.

**Unit V - Image Representation, description and recognition**

**Reference Books –**

3. Digital Image Processing – B.Chanda, D.Dutta and Majumdar Analysis, PHI Publication
5. Digital Image Processing - Rafael C Gonzalez & Richard E. Woods, AWL.
7. Digital Picture Processing - Rose field Kak.

**Dissertation- Marks: 150**

Students individually will carry out a detail study on a topic and implement a related system. The study must include literature survey, methodology and proposed work, experimental details and results, modifications to be included and future directions, applications etc. A report is to be prepared and submitted under the guidance of a supervisor. The report should contain design, implementation and experimental details. The topics involved in the work should be related to the courses undertaken by the student till this portion of progression under the programme and have contemporary relevance. It can involve research and development oriented works and be carried out with an eye on the needs of the industry. The work must be defended through a presentation in front of a panel constituted by selected experts. The quality of the work should be reflected by at least one publication in conference proceedings/ journals etc.
