M.Sc. Forensic Science

The MSc Forensic Science course is designed to provide advanced knowledge and practical training in applying science to solve crimes and ensure justice. It covers a wide range of specialized branches, such as forensic biology, which focuses on analyzing DNA, blood and other biological evidence; forensic chemistry, which deals with substances like drugs, toxins and trace materials; and forensic toxicology, which examines the impact of chemicals and poisons on the human body. Other fascinating areas include forensic anthropology, which identifies human remains; digital forensics, which investigates cybercrimes and digital evidence; and ballistics, which studies firearms and ammunitions to link them to criminal activities. This multidisciplinary course is perfect for those passionate about uncovering the truth and making a real difference in the justice system, offering excellent career prospects in forensic labs, law enforcement, and investigative agencies. Practical skills are also a central focus, with rigorous training in laboratory techniques, including microscopy, toxicological analysis, chemical methods, questioned document examination, and the use of advanced technologies such as DNA analysis, protein sequencing, and next-generation sequencing. Throughout the program, students are encouraged to approach evidence analysis without bias, ensuring that conclusions are based solely on scientific findings. The MSc course also emphasizes the importance of teamwork and collaboration, particularly in laboratory settings, where students work together to acquire, analyze, and interpret forensic data. This collaborative environment mirrors real-world forensic investigations, where professionals from different disciplines often work together to solve complex cases.

Program Outcomes (PO):

Upon successful completion of the Master of Science in Forensic Science program, students will be able to:

PO-1	Knowledge: Provides comprehensive knowledge across forensic disciplines, equipping graduates with the expertise to apply scientific principles in criminal investigations and evidence analysis, while understanding legal and ethical considerations.
PO-2	Critical Thinking and Reasoning: Forensic Science fosters critical thinking and reasoning by training graduates to analyze evidence objectively, evaluate multiple perspectives, and make informed decisions. The program emphasizes logical problem-solving, helping graduates assess forensic data, identify patterns, and draw sound conclusions in complex investigative scenarios.

[Handwritten signatures and dates at the bottom of the page]

PO-3	Problem Solving: Forensic Science sharpens problem-solving skills by teaching graduates to apply scientific methods to complex criminal cases, using analytical tools to identify evidence, develop hypotheses, and draw evidence-based conclusions for effective investigations.
PO-4	Advanced Analytical and Computational Skills: Develops advanced analytical and computational skills, equipping graduates with the ability to use sophisticated tools and techniques for analyzing forensic evidence. This includes DNA profiling, toxicology, and digital forensics, with a focus on accurate data interpretation and the use of computational software to support precise conclusions.
PO-5	Effective Communication: Forensic Science focuses on effective communication, teaching graduates to clearly present complex forensic findings to both scientific and non-scientific audiences. This includes writing detailed reports, presenting in court, and communicating with legal and law enforcement professionals, ensuring forensic evidence is conveyed accurately and effectively in legal contexts.
PO-6	Interdisciplinary Interaction: Forensic Science promotes interdisciplinary interaction by blending knowledge from biology, chemistry, law, criminal justice, and technology. It encourages collaboration across these fields, helping graduates approach forensic investigations holistically. This interdisciplinary approach equips them to work effectively with professionals from diverse sectors, ensuring a comprehensive and integrated contribution to criminal justice and forensic science.
PO-7	Self-directed and Life-long Learning: Encourages self-directed, lifelong learning by enhancing critical thinking and research skills. Graduates are empowered to stay updated with advancements in forensic science, adapt to new technologies, and pursue ongoing education or research to remain at the forefront of the field throughout their careers.
PO-8	Effective Citizenship: Forensic Science fosters effective citizenship by equipping graduates with the knowledge to contribute to society through their expertise. The program emphasizes justice, fairness, and the rule of law, encouraging responsible use of forensic skills in crime-solving and public safety. Graduates are prepared to advocate for the ethical use of forensic evidence, supporting the integrity of legal processes and maintaining public trust in law enforcement and the justice system.
PO-9	Ethics: Emphasizes ethics in forensic practice, preparing graduates to handle sensitive cases with integrity and professionalism. The program ensures a strong understanding of ethical principles like evidence accuracy, transparency, chain of custody, and confidentiality. This

Handwritten mark: S

	focus equips graduates to contribute responsibly to the criminal justice system and maintain public trust in forensic science.
PO-10	Further Education or Employment: Forensic Science prepares graduates for advanced education and diverse careers in forensic science and criminal justice. It equips them with technical, analytical, and legal skills for roles like forensic analyst, crime scene investigator, and toxicologist. Graduates can pursue further research, contribute to the criminal justice system, and explore global career opportunities, while upholding ethical practices in handling sensitive cases.
PO-11	Global Perspective: Equips graduates with global expertise to tackle complex crimes using interdisciplinary skills in biology, chemistry, and digital science. Emphasizing ethical practices, cross-border collaboration, and advanced technologies, it addresses challenges like cybercrimes, terrorism, and environmental crimes. The program fosters research innovation and prepares graduates to work with international agencies, contribute to global justice systems, and shape policies to enhance global security and justice.

Program Specific Outcomes (PSO): At the end of the program, the students will be able to:

PSO-1	Understand the fundamental principles of forensic science, including its various sub-disciplines (e.g., forensic biology, toxicology, digital forensics) and their applications in solving criminal cases. Recognize the interdisciplinary connections between forensic science and related fields such as law, chemistry, and biology.
PSO-2	Apply forensic science principles and methodologies to analyze crime scene evidence, identify forensic issues, and solve complex cases. Utilize appropriate scientific techniques to evaluate physical, biological, and digital evidence in forensic investigations.
PSO-3	conduct research in forensic science, including designing and executing experiments or field investigations, collecting and analyzing data using specialized software tools, and interpreting findings in the context of forensic theories. Present research outcomes accurately and contribute to the advancement of forensic science.
PSO-4	Demonstrate professionalism, ethical behavior, and integrity in forensic practice. Adhere to legal and ethical standards in evidence handling, maintain chain of custody, and identify and address potential ethical challenges related to forensic investigations.

Learning Objectives (L.O):

The objective of the course is to provide a guide in the basic, fundamental and detailed concepts of Forensic Science and Criminology. This course is to introduce to the students the basic knowledge of history, scope, basic principle of forensic science and organizational structure of forensic laboratory. The students also gained the knowledge about section of IPC, CrPC, criminal offences and police organizational structure.

Learning Outcomes (L.O):

After completion of the course, the students will be able to:		
1	Understand the organizational structure of Forensic science laboratory, police organization and laboratory management.	R
2	Understand the criminal offences, laws, section of IPC and CrPC and procedure of investigation.	U
3	Understand the crime and concept of criminology, and their theories.	Ap
4	Understand the Police Science and punishments for crimes.	An

Detailed Syllabus for Crime Scene Management

Unit	Topics	
	Introduction to Crime scene investigation Definition and Types of Crime scene, Principles of Forensic science, Experts team Composition, Role of First responding officer, Physical Evidences. Introduction, Definition, Types and their collection, Preservation, packaging, transporting and forwarding, various techniques used for handling, Physical and trace evidences, Crime scene tool kits and equipment's etc. Ethics in Crime Scene Investigation	I
	Digital evidence: Introduction, Definition types and their collection, preservation, packaging, transporting, storage and forwarding, Methodological approach to processing the crime scene. Processing a crime scene, Searching the scene-Types of Searches, Zone Search: Ever Widening, Circle Strip Search, and Grid Search, Indoor searches and outdoor searches	II
	Crime Scene Documentation, Crime Scene Photography, Videography, sketching and mapping. Chain of custody, interpreting a crime scene, Reconstruction of a crime scene.	III
	Crime scene management of crime scene investigation in the cases of fire and Arson, Explosions, Burglary and Theft, Hit & run, Sexual offences, Death investigation. Use of Forensic light sources for detection of biological evidences at scene of crime scene, Presumptive test for identifying narcotic drugs, blood, semen, explosive and Gunshot residue sets. Computer graphics, Electronic Detectors ND Magnetic locators.	IV

Instrumental analysis in Forensic Sciences

Unit I	Concept of analytical forensic chemistry, qualitative and quantitative analysis. Basic concepts of Atomic spectra, Energy levels and Molecular spectra, Electromagnetic spectrum, Sources of radiation, Interaction of Energy and Matter, Introduction to spectroscopy, Basic Principle involve in various spectroscopic techniques, calibration methods, UV-Visible spectroscopy: Basic concepts, Principles and Forensic applications of UV-visible spectroscopy, Lambert-Beer law and its deviations, fluorescence spectroscopy, Luminometry, InfraRed (IR) and Raman spectroscopy, Fourier transform InfraRed (FTIR) spectrophotometer, Surface Plasma Resonance (SPR), Nuclear Magnetic Resonance spectroscopy	I
Unit II	Chromatography: General introduction to chromatography, Basic concepts, principles, performance parameter and functions. Thin Layer chromatography (TLC), Affinity Chromatography, Gel Exclusion Chromatography, Ion Exchange chromatography, High Performance Liquid Chromatography (HPLC), Gas Chromatography (GC) and High-performance Thin layer Chromatography (HPTLC). Detector and its types.	II
Unit III	Spectrophotometry: General introduction, Basic concepts, Principles and Forensic application of Atomic Absorption Spectrophotometry (AAS), Atomic emission Spectrometry (AES), Inductive coupled plasma (ICP), X-ray diffraction (XRD), X-ray Photoelectron spectroscopy (XPS), Mass spectrometry. Differential Scanning Calorimeter (DSC), Differential Thermal Analyzer (DTA), Neutron Activation Analysis (NAA)	III
Unit IV	DNA sequencing methods, Capillary electrophoresis, Genetic Analyzer, Polymerase Chain Reaction, Real Time PCR, Microarray, Karyotyping and FISH, Basic principles of Microscopy, Comparison microscope, Stereoscopic microscope, Fluorescent Microscopy, Infrared Microscope, Scanning Electron Microscope (SEM) & Transmission Electron Microscope (TEM)	IV

Topics	No. of Lectures
I Introduction to Forensic Biology: Biological fluids of forensic significance (Blood, Semen, Saliva, Sweat, Urine, Vitreous humour, Amniotic fluid, Milk, Fecal matter). Cellular component of Blood. Hair and its forensic importance. Blood grouping systems (ABO, Rh, MN, Duffy, Kidd, Kell, Lutheran and P system). Biology of pollen and its forensic significance. Microbes of forensic importance.	I
Forensic Biochemistry: pH, Buffer. General Introduction of Biomolecules (Structure & Function). Antigen, Antibody & Lectins. Introduction to Enzyme & Hormones. Identification (Presumptive and confirmatory) of evidences of biological origin. Biochemical markers of Forensic significance.	II
Collection and preservation of biological evidence. Antigen-antibody interaction (Agglutination, Precipitation) and serological techniques based up on it (ELISA, RIA, Complement fixation, Immuno diffusion). Electrophoresis (SDS-PAGE, Agarose Gel, Immuno-electrophoresis, Isoelectric Focusing). Species identification & Blood typing (Wet & Dry). Blood pattern analysis (Blood stain characteristics, types, documentation) & its application in forensic investigation.	III
IV Wildlife Forensic: Recovering evidence at poaching scenes; Illegal wildlife trade, Species identification, Protected and endangered species of animals and plants; Sanctuaries and their importance; Relevant provision of wild life and environmental act; Types of wildlife crimes, Wildlife artefacts (Bones, skin, fur, hair, nails, blood, feather, etc.). Insects of forensic importance; collection of entomological evidence during legal investigations, entomological samples(from the body, during autopsy, from buried remains from enclosed structures & aquatic habitats). Factors that influence insect succession on carrion, molecular methods for forensic entomology.	IV

Learning Objectives (LO):

These learning objectives aim to develop a comprehensive understanding of the intersections between traditional Indian wisdom and contemporary forensic science, emphasizing the role of ancient knowledge in modern-day applications.

Course Outcomes (CO):

No.	Expected Course Outcome	Level
1	students will be able to understand the criminal justice systems of ancient India as described in texts like <i>Manusmriti</i> , <i>Arthashastra</i> , and <i>Yajnavalkya Smriti</i> . Students will also be able to critically analyze ancient Indian methods of crime detection and justice delivery.	R
2	Understanding how traditional Ayurvedic principles were applied in postmortem analysis and how this ancient knowledge can be integrated with modern forensic toxicology practices to enhance criminal investigations.	U
3	enable students to understand traditional Indian approaches to criminal psychology, including the concepts of <i>manas</i> (mind) and <i>buddhi</i> (intellect), and their role in understanding criminal motives and behavior, developing an appreciation for the interplay between cultural practices and criminal psychology in forensic science.	Ap
4	learn about ancient Indian knowledge of environmental elements such as soil, water, and natural resources, and how this was applied in forensic investigations, particularly in cases of poisoning or environmental crime.	An

Detailed Syllabus EST 210 - Forensic Documents and Fingerprints

Unit No.		No. of Lectures	Cr. No.
	Nature and problems of Document examination, Classification of documents, Types of Forensic Documents; Collection of questioned Documents, Specimen and Requested handwriting, handling, preservation, marking and forwarding of documents to the laboratory; Writing instruments and their characteristics. Characteristic features in Handwriting: Principles of handwriting Identification, Comparison, Class and Individual Characteristic of Handwriting, Factors affecting hand writing.		I
	Forgery, Types of Forgery, Examination of Forgery, Examination of Signature characteristics, Age determination of documents, Alterations in Documents, Examination of Paper & Ink, Examination of typed documents, Examination of Seal, rubber & other mechanical impressions, Handling and examination of charred documents, Examination of Forged currency notes. Basic tools needed for Forensic document examination, Photography of documents, Principle and Forensic significance of Video Spectral comparator (VSC), Electrostatic detection apparatus (ESDA). Disguised, Indented and secrete writings, Anonymous letters.		II
	History and development of finger prints, Structure of ridged skin, Composition of Sweat Classification of finger Prints, pattern types, classification of Fingerprints (Primary to key classification). Ridge Counting, Ridge Tracing, and Minutiae Examination, Methods of taking fingerprint from living person: Rolled & Plain Searching of finger print evidence on crime scene.		III
	Chance Finger Prints: Conventional methods of development of latent finger prints, Development of Latent fingerprint: Physical, Chemical and Fuming method, Metal Deposition Techniques, Systematic approach to latent print processing, preserving and lifting of finger prints; Photography of Finger Prints, comparison of finger prints. Automatic Finger Print Identification system (AFIS), Expert evidence. Admissibility of Fingerprint, Admissibility of Fingerprint.		IV

Detailed Syllabus for Forensic Genetics & DNA Profiling

Topics	No. of Lectures	CO No.
An Introduction to Genetic Material, Structure of DNA, denaturation and renaturation of DNA, DNA binding proteins, factors affecting DNA stability, DNA Damage & repair, Chemical nature of DNA, Replication of DNA in prokaryotes and eukaryotes, genetic code, degeneracy and universality of genetic code, transcription and translation machinery.		I
Elements of human genetics: Introduction, heritability, human genetic variations, human chromosomes, Mendelian inheritances: Dominant inheritance, recessive inheritance, sex-linked inheritances, polymorphic traits; Heritable human diseases; Metabolic/molecular basis and detection of inherited disease, gene mapping; Genetic markers and their forensic significance. Molecular Biology Techniques: Basic principle of gene cloning and DNA analysis, cloning vectors-Plasmids and Bacteriophages, Genetic Manipulations, Gene cloning, Enzymes used in DNA manipulations- Nucleases, Ligases, polymerases, DNA modifying enzymes, Restriction Enzymes, DNA extraction from Plasmids, bacterial cells and animal cells, DNA sequencing, Gene Libraries construction, Colony Hybridization, Nick translation, Expression of Genes. Gene cloning and DNA analysis in Forensic Science.		II
Biological evidence- Sources collection, characterization and storage; DNA extraction and Quantification; General principles of DNA extraction and quantification; Basic concept of sequence variation-VNTRs, STRs, Mini STRs, SNPs. Detection techniques-RFLP, PCR amplifications, Y- STR, Mitochondrial DNA Evaluation of results, frequency estimate calculations and interpretation, Allele frequency determination, Match probability – Database		III
STR Profiling: Structure of STR loci; The development of STR multiplexes; Detection of STR polymorphisms; Interpretation of result; Assessment of STR profiles: Stutter peaks. Sp. Pull-up; Degraded DNA; Statistical Assessment of STR profiles; estimating the frequencies of STR profiles. History of DNA profiling applications in disputed paternity cases, child swapping, missing person's identity, civil immigration, limitations of DNA profiling, Analysis of SNP, DNA chip technology Microarrays Cell free DNA, Use and application of DNA typing in wildlife investigations. Detailed Syllabus: Part II: Forensic Chemistry and Toxicology

Topic	CO No.
Forensic chemistry Definition and scope, Introduction to Narcotic drugs, Depressants, stimulants, and Hallucinogens their Active components and method of analysis, Designer Drugs & Anabolic steroids, Analytical methods of analysis of IMFL, Country and Illicit liquor, Denatured spirits and their analysis.	I
Fire and Arson investigation- Methods of flammable oil residues detection from debris; Detection of adulteration in Petrol and Diesel, edible oils, Examination of chemicals used in trap cases, Analysis of metals in cheating cases, Explosives: Introduction, classification and various methods of analysis of Explosives.	II
Definition and scope, Poisons-Definition and Classification. Methods of isolation of poison from Viscera, Collection and Preservation of Viscera and other relevant materials, Analysis of ethyl alcohol and methyl alcohol in biological fluids.	III
Extraction methods of poisons from viscera, blood and urine. Isolation and identification of Plant Poisons, opium and its derivatives, Benzodiazepine tranquilizers, Metallic Poison, Insecticides and Pesticides. Basic concepts of Poisonous Mushrooms, Poisonous fungi, Food Poisoning, Common vegetable abortifacients, Animal poison, Snake venom.	IV

Learning Objective (LO)

The objective of the course is to introduce students about research in forensic science, statistical analysis of research data, use framework of these methodologies for understanding effective lab practices and scientific communication, research publication ethics.

Course Outcomes (CO):

CO	Expected Learning Outcomes	Assessment
1	Give background on history of forensic science, emphasizing methodologies used to do research, use framework of these methodologies for understanding effective lab practices and scientific communication and appreciate scientific ethics.	R
2	Understand history and methodologies of scientific research, applying these to recent published papers.	Ap
3	Understanding the statistical methods used in scientific data evaluation.	U
4	Understand and practice scientific reading, writing and presentations; Appreciate scientific ethics through case studies.	An

CL : Cognitive Levels (R-Remember; U-Understanding; Ap-Apply; An-Analyze; E-Evaluate;

Elements of a Quality Management System: Quality, Total Quality, Quality assurance, Quality control Quality system. Quality Planning, Quality Audit: Internal and External Audit & MRM, History and development of ISO, Terminology of NABL. Benefits of ISO9000 series of standards. ISO9001 Requirement.		I
Foundation of research: Research: Meaning, types and methods. Objective and hypothesis of research. Research design. Steps of research and report writing. Sampling: Random and Non-Random.		II
Statistical Analysis: Significance and scope of statistics in forensic science. Basic concepts of frequency distribution. Measures of central tendency: Mean, Median, Mode. Measures of dispersion: Range, Standard deviation, Skewness, Kurtosis. Correlation.		III
Introduction to philosophy: definition, nature and scope, concept, branches. Ethics: definition, moral philosophy, nature of moral judgements and reactions Ethics with respect to science and research, Intellectual honesty and research integrity, Scientific misconducts: Falsification, Fabrication" and Plagiarism (FFP). Redundant publications: duplicate and overlapping publications, salami slicing, Selective reporting and misrepresentation of data.		IV

Topics	No. of Lectures	CC No.
I The role of proteins- amino acids- nucleic acids- lipids and polysaccharides in modern biomaterials. Overview of natural Bio nanomachines: Thymidylate Synthetase, ATP synthetase, Actin and myosin, Opsin, Antibodies and Collagen, basics of nonmarital synthesis, principal of microfluidics, quantum dots, Electrochemical sensors, development of DNA aptamer sensors, optical sensors, colorimetric sensors.		I
II Introduction, Structural Characterization, X-ray diffraction (XRD), Scanning electron, microscopy (SEM), Transmission electron microscopy (TEM), Scanning probe microscopy (SPM). Chemical Characterization, Isothermal chemistry titration (ICT), Surface Plasma Resonance, Circular dichroism, Physical Properties: Thermal stability and lattice constant, Mechanical properties, Optical properties, Electrical conductivity, Ferroelectrics and dielectrics, Superparamagnetic, Emission spectroscopy, luminescence spectroscopy, Raman spectroscopy.		II
III Device for testing in Forensic Science laboratory, Device for drug of abused testing, Device for testing of explosive content, development of sensors based of Lateral Flow, immunoassays based on nanomaterials, biosensors-based methods used for detection of latent fingerprints, pesticides, toxins, venom etc.		III
IV DNA Aptamer technology and its application in forensics. Protein based nanostructures building blocks and templates – Proteins as transducers and amplifiers of biomolecular recognition events. DNA based nanostructures – Topographic and Electrostatic properties of DNA and proteins – Hybrid conjugates of gold nanoparticles – DNA oligomers		IV

UNIT 253 – Wildlife Forensics and Forensic Entomology

Topics	No. of Lectures	Cd No.
Wildlife ecology, Definition of wildlife, free living, domestic, captive and feral animals, wildlife conservation and its importance, Zoographic regions and biomes of India, Uniqueness of Indian biodiversity, reason and causes of wildlife depletion, rare, threatened and endangered species of India.		I
Introduction to Wildlife Crimes and its types, Investigation of a wildlife crime scene, Different methods of killing and poaching of wildlife animals, Techniques of Species identification, types of wildlife evidences, wildlife artefacts, tools and techniques of wildlife crime investigation.		II
Illegal wildlife trade, Identification of pug marks of different animals, Wildlife Protection Act, 1972, Introduction to Wildlife conservation agencies-WWF, IUCN, CITES, WCCB, Wildlife conservation society, Defenders of Wildlife, Big lite Foundation, International fund for Animal welfare, National wildlife federation, Red Data Book, TRAFFIC.		III
Definition, nature and scope of Forensic entomology. Types of forensic insects, collection of entomological evidence, Insect succession, molecular methods for forensic entomology. Life cycle of Insects.		IV

Syllabus: Forensic Psychology - Practical-based on Forensic Psychology

Topics			
I	- To cite a criminal case in which narco analysis was used as a means to detect deception. - To review a crime case involving serial murders. Comment on the psychological traits of the accused.		I
II	- To study a criminal case in which hypnosis was used as a means to detect deception. - Assessment of intelligence through inventories..		II
III	- Assessment of mental status through interviews. - Assessment of personality using EPI.		III
IV	- Assessment of personality using MMPI. - To prepare a report on relationship between mental disorders and forensic psychology..		IV

Learning Objective (LO)

The objective of the course is to provide a guide in managing Crime Scene investigation. This course enrich students with knowledge of Collection of various type of evidences, search methods, crime scene documentation and reconstruction of crime scenes.

CL	Expected Learning Outcomes	
1	Understanding the basic principles of forensic science.	R
2	Understanding the methods of search and approaches for crime scene processing.	U
3	Understanding physical evidence and its collection preservation.	Ap
4	Understanding the crime scene events and its reconstruction.	An

Detailed Syllabus: Forensic Science: Advance in Forensic Chemistry

Topics		
Analysis of beverages: Alcoholic and non-alcoholic beverages, IMFL, country made liquor, licit and illicit liquors, Analysis of Proof spirit, Rectified spirit, denatured spirits, Special denatured spirit, Blood alcohol analysis by chemical methods; Significance of blood alcohol, Breath Screening devices		I
Arson: chemistry of fire, pattern of fire, investigation and evaluation of clue material, analysis of arson exhibits by instrumental method, Examination of petroleum products: distillation and fractionation, standard methods of analysis of petroleum products like kerosene, petrol, diesel, lubricating oil, greases..		II
Drugs of abuse: introduction, classification of drugs of abuse, drugs of abuse in sports, designer drugs and their forensic examination. Qualitative and quantitative analysis of Opium and opiates. Forensic examination of precursor chemicals and drugs under NDPS Act 1985.		III
Analysis of trace evidence: cosmetics, dyes, paints, pigments, fibers, oils, fats, greases, soil and industrial dusts, chemicals; Analysis of corrosive chemicals- acids and alkalies; Chemistry and examination of detective dyes uses in trap cases; Examination of cement and concrete, consumer item as gold, silver etc.		IV

Revised Syllabus: FS 2013-2014

Topic		
Human genome: Genome project history, organization and goals of human genome project, Mapping strategies, DNA segment nomenclature, Human genome diversity, organization of human genome, Comparative genomics: Overview of prokaryotic and eukaryotic genomes, C-value, number of genes and complexity of genomes, Conservation and diversity of genomes, Comparative genomics as an aid to gene mapping and study of human disease genes.		I
Structure and organization of eukaryotic genomes- nuclear and mitochondrial; Computational analysis, Databases, Finding STR markers; Tools for genome analysis- PCR, RFLP, DNA fingerprinting, RAPD, SNP detection, SSCP; Human Genome mapping methods, BAC libraries and shotgun libraries preparation, Physical map, Cytogenetic map, Contig map, Restriction map, UCSC browser. Introduction to sequencing, Maxam and Gilbert method, Sanger Sequencing techniques and applications; Next Generation sequencing (NGS), Introduction to NGS, quality check, Library Preparations, sequencing reaction); Platform overview (Illumina, 454 (Roche), SOLiD (Life technology), Ion Torrent, Nanopore, PacBio; Types of NGS, DNA-sequencing - Whole genome sequencing, exome sequencing		II
Pairwise sequence alignment: BLAST, PSI-BLAST, CLUSTAL-W, CLUSTAL-X, Phylogenetic analysis: Sequence Alignment formats: Sequence Alignment/Map (SAM) format, Binary Alignment/Map(BAM) format, Application of different sequencing technique, Bioinformatics resource: NCBI, EBI, ExPaSy, DNA database, Protein Databases.		III
Overview of protein structure-primary, secondary, tertiary and quaternary structure, Relationship between protein structure and function; Outline of a typical proteomics experiment, Identification and analysis of proteins by 2D analysis, Spot visualization and picking; Tryptic digestion of protein and peptide fingerprinting, Mass spectrometry; far western analysis; Protein interaction maps, Protein arrays definition; applications- diagnostics, expression profiling. Human forensic proteome, Non-traditional Forensics, Proteomics for microbial forensic.		IV

II	Microbes and Forensic Science: General characteristic of Virus, Bacteria and fungus (Morphology, Nutrition, reproduction & economic importance). Bacteria of Forensic importance. Fungi of forensic importance, Anti-bacterial & Antifungal agents. Forensic Aspects of Biological Toxins. Forensic Analysis of Trace and Unculturable Specimens etc.		I
	Biological agents in warfare: Collection, transportation and preservation of microbial forensic samples. Sterilization (Physical & Chemical) Categories of biological weapons; Toxins and their mode of action & identification, laboratory setup, epidemiologic investigation for public health, investigation of suspicious disease outbreak; Biosafety and biosecurity, Bio-surveillance documentation and case studies.		II
	Introduction to Immune system: Cells and organs of Immune system. Innate immunity: Complement system, phagocytosis, extravasation, Toll like receptors, Host-microbe interaction. Acquired Immunity: B-cell and T-cell proliferation and maturation, Major Histo-compatibility complex (MHC-I & MHC-II), Antigen presentation, Hypersensitivity, Immunization.		III
	Immunological communication and immunological receptors, Immunological mediators, Humoral & Cell mediated Immunity, Hybridoma technology and monoclonal antibodies. Animal cell culture for immunological research (Cell line, Culture media, Culturing technique & aseptic condition). Scope in forensic immunology, Toxin & drug mediated immune-modulation, Animal model for forensic immunological research. ELISA, Western Blotting, Flow Cytometry.		IV

L-360-Digital Evidence (LO):

The objective of the course is to introduce the student's to basic of digital evidence collection, detection of deleted files, email forensics, encrypted data recovery, hard imaging.

Expected Course Outcomes (ECOs):

At the end of the course, the student will be able to:		
1	Students will able to learn identification, seize and preserve digital evidence	R
2	Students will able to learn to detect deletions, obliterations and modifications of files using Autopsy and encase software's	U
3	Students will able to learn to cryptographic PGP, email forensics, identification of encrypted and hidden files	Ap
4	Students will able to learn imaging hard disk and protection of digital records.	An

Detailed Syllabus: FET 405: Recent Advancement in Forensic Serology & Immunology

Unit No.	Topic	CD
I	Blood: Composition and functions, collection and species identification, Structure and function of serum proteins, Haemoglobin and its variants, Haptoglobins. Blood groups – history, biochemistry and genetics of ABO, Rh, Mn and other systems. Methods of ABO blood grouping (absorption-inhibition, mixed agglutination and absorption elution) from blood stains and other body fluids/stains viz. menstrual blood, semen, saliva, sweat, tear, pus, vomit, hair, bone, nail. Secretors and non-secretors. Blood groups that make racial distinctions.	I
II	Analysis of Blood in Forensic Serology: Identification of blood, Chemical test for Blood identification, Species Origin determination in Blood Stains. Blood Pattern Analysis: History of Bloodstain Pattern interpretation, Properties of human blood, Size, Shape and Directionality of bloodstains, Spattered blood, other Bloodstain Patterns, Interpretation of Bloodstain on clothing and footwear.	II
III	Forensic Identification of Biological Fluids and Stains: Composition of Semen and morphology of spermatozoa, identification of Semen, Qualitative Assays of seminal fluids: Acid phosphatase, microscopic identification of Spermatozoa. Oligospermia and Azoospermia. Identification of Azoospermia Semen stains, Prostate specific Antigen (PSA, P30) as an indicator of Semen. Saliva: Composition, Identification tests	III
IV	Immunology: Immune system, immune response, innate and acquired immunity and antigens, Immunoglobulin: Types, physio-chemical properties and function, Rising of antisera. Lectins: Forensic significance, buffers and serological reagents, methods of sterilization employed for serological work. Antigen-Antibody Reactions: Precipitation, agglutination, complement, neutralization, immunofluorescence	IV

Course Objective:

The objective of the course is to introduce students about concept of glass analysis, tool mark analysis, microscopic examination of paints and speaker identification.

Course Outcome (CO):

Course Outcome	Course Title	Cognitive Level
1	Students will learn about soil and glass evidence and their analysis.	R
2	They will know about tool marks, their identification and comparison	U
3	They will also know about microscopic and instrumental analysis of paint evidences.	Ap
4	They will have knowledge of speaker identification and tape authentication for forensic purpose.	An

Unit - 431 - Recent Advances in Forensic Physics

Topic		
IV	Soil as evidence and challenges to forensic scientist, Composition and types of soil, Methods of examination of Preliminary discrimination methods and Density gradient tube technique. Glass: Types of glass and their composition, examination of glass fractures under different conditions, determination of direction of impact: cone- fracture, rib marks, hackle marks, backward fragmentation, colour and fluorescence, physical matching, density comparison, physical measurements, Refractive index by Refractometer, Elemental analysis, Interpretation of glass evidence.	I
	Tool marks: Types of tool marks: compression marks, striated marks, combination of compression and striated marks, repeated marks, class characteristics and individual characteristics, tracing and lifting of marks. Physical, chemical and instrumental methods of examination of strings/ropes, fibers, threads & fabrics, Wires/cables, seals, counterfeit coins, Physical match of broken objects. Restoration of erased/obliterated marks in different surfaces.	II
	Forensic analysis of paint: Macroscopic & instrumental analysis like IR spectroscopy, Raman spectroscopy & X-ray diffraction, elemental analysis, Interpretation of Paint evidence.	III
	Speaker identification and tape authentication: Introduction to techniques of pattern recognition and comparison. Legal aspects. Principle and forensic application of Brain fingerprinting, Narco analysis and Lie detection.	IV

Detailed Syllabus for B.Sc. (H) 22 - Forensic Advanced Forensic Ballistics

Topics		
Firearms, Definition, History, classification and characteristics of firearms. Examination and identification of fire arms. Identification of origin, improvised/ country-made/ imitative firearms and their constructional features, Velocity and pressure characteristics under different conditions; various types of bullets and compositional aspects, latest trends in their manufacturing and design		I
Internal Ballistics: Definition, ignition of propellants, shape and size of propellants, manner of burning, Piobett's law, pressure space curve, shot start pressure. various factors affecting the internal ballistics: All burn point, velocity, space curve Le Due's formula, muzzle velocity, factors affecting muzzle velocity, theory of recall External Ballistics: Definition-trajectory drop in the flight of the projectiles force of gravity air resistance-base drag, Yaw, shape of bullet, (Spherical ball, Cylindrical-conical, flat nose, round nose etc), effective range, extreme range. Terminal Ballistics: Definition, behavior of various type of bullets on the target, remaining velocity, stopping power, Ricochet.		II
Different types of marks produced during firing process on cartridge-firing pin marks, breech face marks, chamber marks, extractor and ejector marks and on bullet number/direction of lands and grooves, striation marks on the lands and grooves. Class and individual characteristics. Determination of range of fire-burring, scorching, blackening, tattooing and metal fouling, shots dispersion and GSR distribution, time of firing, different method employed, and their limitations Analysis of Gunshot Residues: Mechanism of formation of GSR.		III
Firearm injuries: Evaluation of injuries caused due to shot-gun, rifle, handguns and country made firearms, methods of measurements of wound ballistics parameters, post-mortem and ante mortem firearm injuries; Report writing and expert's evidence.		IV

Course Objective:
The objectives of this course are to prepare the students to adapt to the research environment and understand how crime scene samples are executed in forensic science/ research laboratory. It will also enable students to learn practical aspects of research related to criminal investigation and train students in the art of analysis and report/ thesis writing.

Course Objectives		
No.	Objectives	Cognitive Level
1	The students should have educated to adapt to the research environment and understand how projects are executed in a research laboratory. It will also enable students to learn practical aspects of research and train students in the art of analysis and thesis writing	R
2	The students will be able to Students should be able to learn how to select and defend a topic of their research, how to effectively plan, execute, evaluate and discuss their experiments.	U
3	Students should have In-depth knowledge of the chosen area of research as well as have capability to create, analyse and critically evaluate different technical solutions, ability to conduct research independently to perform analytical techniques/experimental methods. The student should have skilled in project management skills, report writing skills, Problem solving skills, communication and interpersonal skills	Ap
4	The students will be able to learn experimental details used in criminal investigation system to solve the criminal cases.	An

S. No.	Topic	Marks
	Planning & performing experiments Based on the project proposal submitted in this semester, students should be able to plan, and engage in, an independent and sustained critical investigation and evaluate a chosen research topic relevant to Forensic Science and Society. They should be able to systematically identify relevant theory and concepts, relate these to appropriate methodologies and evidence, apply appropriate techniques and draw appropriate conclusions to criminal cases. Senior researchers should be able to train the students such that they can work independently and are able to understand the aim of each experiment performed by them which directly involved in criminal investigation system. They should also be able to understand the possible outcomes of each experiment.	I
	Thesis writing At the end of their project, thesis has to be written giving all the details such as aim, methodology, results, discussion and future work related to their project. Students may aim to get their research findings published in a peer-reviewed journal. If the research findings have application-oriented outcomes, the students may file patent application.	II

Learning Objectives (LO):
These learning objectives aim to his course covers mobile forensics techniques, including data extraction methods, evidence preservation, analysis of mobile data (calls, messages, multimedia, location), mobile security (encryption, passwords, biometrics), and advanced methods like cloud-based forensics and AI, with a focus on reporting and presenting forensic findings.

Course Objectives:

Course Outcomes		
At the end of the course, the students will be able to:		
1	Understand the definition, importance, types of mobile devices and operating systems, hardware components, software architecture, file systems, and the significance of the chain of custody and evidence preservation in mobile forensics.	R
2	Understand different data acquisition methods such as manual, logical, physical, and cloud-based extraction, and explore the tools used in mobile forensics like Oxygen Forensics, Magnet AXIOM, and Cellebrite, along with data integrity verification through hashing.	U
3	Develop skills to analyze mobile data such as call logs, messages, multimedia, deleted data, and social media, along with location data analysis and its forensic implications.	Ap
4	Mobile Network Analysis and Security Learn how to analyze mobile network data such as CDRs, SMS, MMS, browsing history, and emails, while understanding encryption techniques, password protection, and biometric authentication in mobile security.	An

"3"-Strong; "2"-Moderate; "1"-Low; "-"-No Correlation

Syllabus: Mobile & Network Forensics

No.	Topics	No. of Lectures	Seq. No.
I	Definition and importance, Types of mobile device & its Operating systems, Hardware components, Software, Architecture and file systems, Chain of Custody and evidence preservation.		I
	Types of data acquisition & tools: Manual extraction, logical Extraction, physical extraction and Cloud-based extraction, Oxygen Forensics, Magnet AXIOM, Cellebrite ,Data Integrity and verification- Hashing methods.		II
III	Analysis of Mobile data: Call logs, messages & contacts, recovering Deleted Data, Analysis of multimedia, investigation Social Media & messaging apps. Location data analysis(GPS).		III
	Mobile Network Analysis and security: CDRs,SMS,MMS,Browsers and email Forensic, analysing browsing history and cookies, Encryptions techniques , Password,Patterns,Biometric Authentication.		IV

Readings:

- "Mobile Forensics: Advanced Investigative Strategies" by Lee Reiber
- Android Forensics: Investigation, Analysis and Mobile Security for Google Android" by Jonathan Zdziarski
- Mobile Device Forensics: A Guide for Digital Investigators" by Robert J. McGrath
- "Practical Mobile Forensics" by S. S. P. Yadav, Sudhir V. U
- "iOS Forensics: Mobile Device Security and Forensics" by Nick S. S.
- "Mobile Forensics Field Guide" by Craig Ball
- Computer Forensics: Investigating Networked Computers" by EC-Council
- Handbook of Digital Forensics and Investigation" edited by Eoghan Casey
